

## How to save the slide as a picture

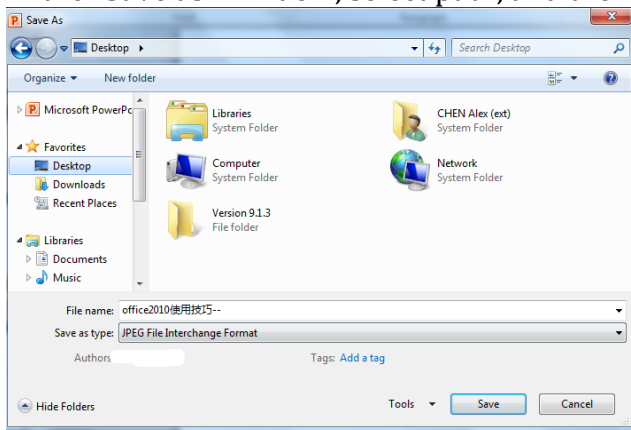

We want to save the slide to all picture formats sometimes, how we to do that?  
This Time,we will teach you how to save the slide as a picture。

### Steps :

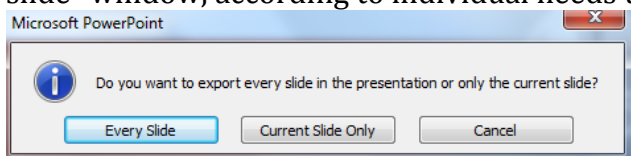

First, open the slide which needs to be saved as a picture, click to the "file" → "save and send", in file type, select "change file type" → "picture file types" option to save the picture in the format. I choose "JPEG file interchange format" setting, and then click below the "Save as" button.

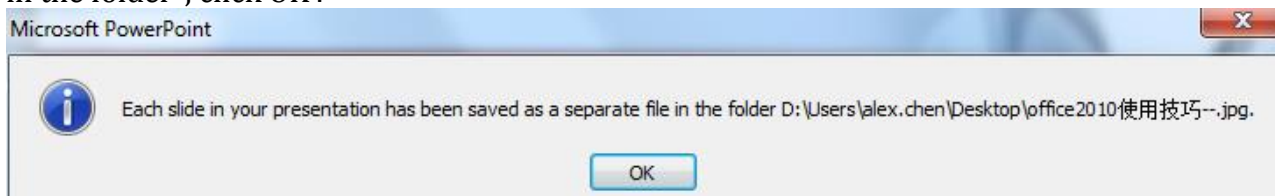

In the "Save as" window, select path, and then set the name, then click "Save".

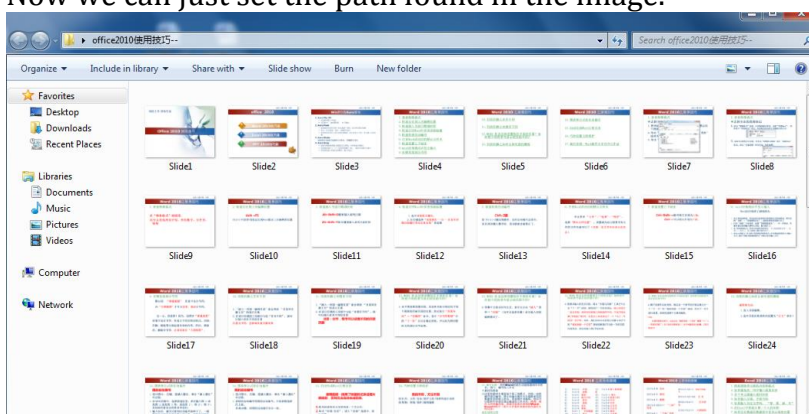

This will pop up a "do you want to export every slide in the presentation or only the current slide" window, according to individual needs to set, I chose "Every Slide" (that is, all slides).

Finally, PowerPoint prompts "Each slide in your presentation has been saved as a separate file in the folder", click OK.

Now we can just set the path found in the image.

See you next week
