

Share your Internet connection with Personal Hotspot

If you're not in range of a Wi-Fi network, you can still get on the Internet with an Pad or a computer by setting up a Personal Hotspot. A Personal Hotspot lets you share the cellular data connection of your Smart Phone (Wi-Fi + Cellular). This time, we will introduce how to use Mobile HotSpot to share wireless Internet access.

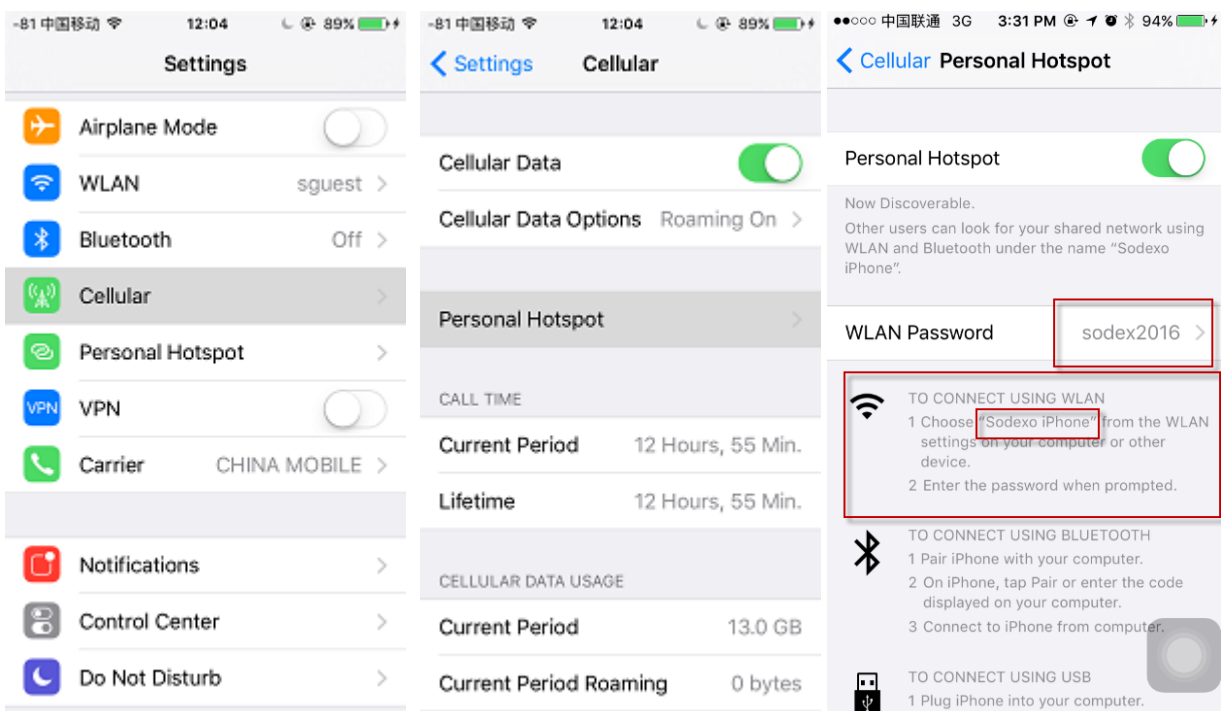

Steps - Set up Personal Hotspot

- iPhone (9.0)

1. Tap **Settings > Cellular**.
2. Tap **Personal Hotspot** and turn it on.

After you set up Personal Hotspot, you can go to **Settings > Personal Hotspot** to turn it on or off and change your password.

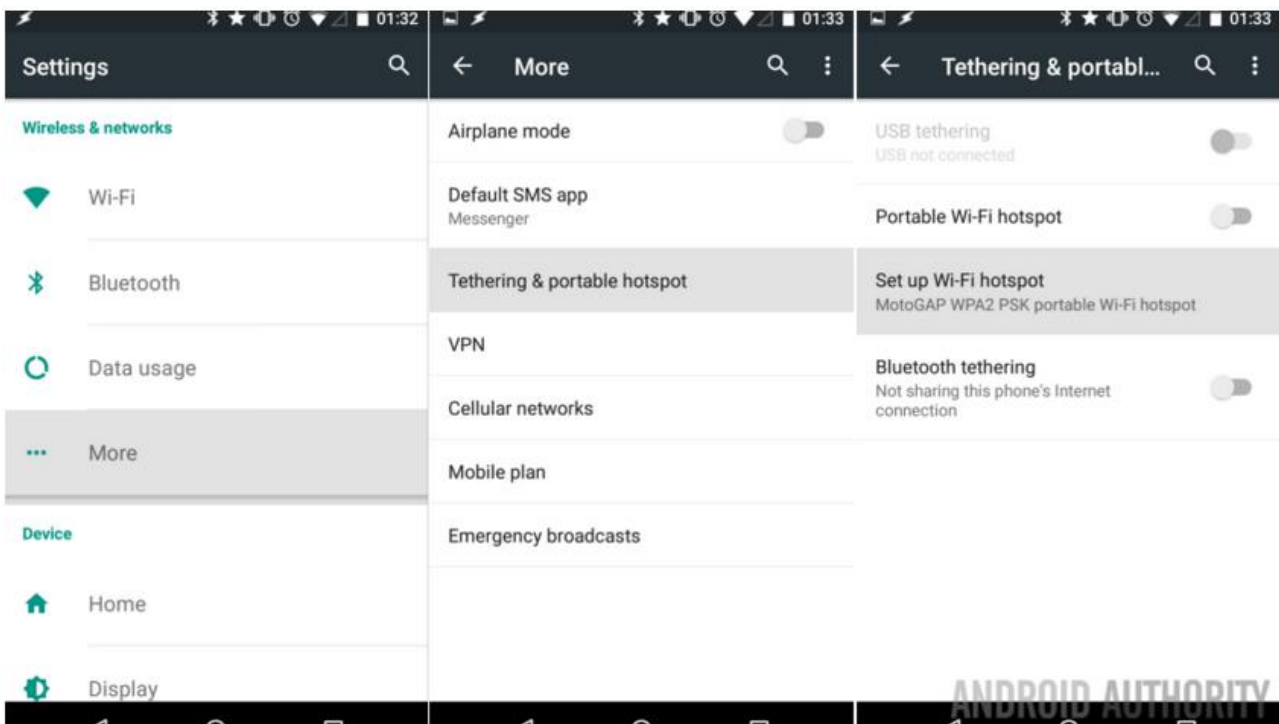

For example the following setting is : name "**Sodexo iPhone**" mobile hotSpot (this is name of your mobile phone) , the password is "**sodex2016**".

- Android (6.0)

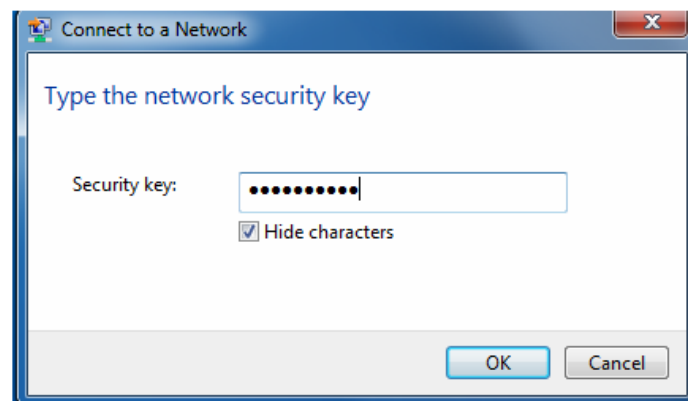

1. Tap **Settings** > **More** button at the bottom of the Wireless & networks section.
2. Tap **Tethering and portable hotspot** > **Portable WI-FI hotspot** and turn it on.

Tap on **Set up Wi-Fi hotspot**. you can make security settings for a connection the safety can be changed to "WPA PSK" or "WPA2 PSK",and then type the key shall be not less than 8 characters, and then click **Save**.

Setps - Connect to Hotspot

After turned on personal hotspot, this wireless networks can be found in your other device (phone or PC), click the wireless network, input the password ,then connecting successfully.

See you next week
